CAREER SUMMARY

Senior Software Engineer with 6+ years building full-stack applications, distributed backend systems and data pipelines using Java, Kotlin, Python and TypeScript. Proficient in REST API design, microservice architecture, CI/CD automation and infrastructure across AWS, GCP and Azure. Experienced in React, Node.js, Spring Boot and FastAPI with Docker and Kubernetes deployment. Delivered data workflows, orchestration systems and analytics platforms across industrial and enterprise domains. Collaborated with cross-functional teams through agile workflows and technical documentation to ship features across the full Software Development Lifecycle.

TECHNICAL SKILLS

- **Programming Languages:** Java, Kotlin, Python, C#, C++, Ruby, Scala, Rust, Go
- **Web Development:** React, Angular, Vue.js, Next.js, Node.js, TypeScript, JavaScript, Redux, Tailwind CSS
- **Backend Technologies:** Spring Boot, FastAPI, Django, Express.js, Apache Kafka, RabbitMQ, AWS SQS/SNS, Azure Service Bus
- **Frameworks and Libraries:** React Native, RxJS, GraphQL, REST APIs, LangChain, LlamaIndex
- **Database and Storage**: PostgreSQL, MySQL, DynamoDB, Redis, MongoDB, Elasticsearch, Snowflake, Redshift, Azure Blob Storage
- **Data and ML Engineering:** Apache Spark, Airflow, dbt, Pandas, scikit-learn, XGBoost, MLflow, SageMaker
- **Cloud and DevOps:** AWS (Lambda, EC2, S3, CloudWatch), GCP(BigQuery), Azure, Docker, Kubernetes, Terraform, Helm, Jenkins
- **Testing and Tools:** JUnit, Jest, Pytest, MockK, Selenium, Git, SonarQube, Postman, JIRA

PROFESSIONAL EXPERIENCE

Senior Software Engineer | DLCFL, Florida **Jan 2025 - Present**

- Developed full-stack clinical applications using TypeScript, Node.js and React with Redux state management, containerized with Docker, improving patient workflow completion rate by 10% through responsive UI and clinical analytics dashboards.
- Integrated HIPAA-compliant healthcare billing and appointment scheduling systems using RESTful and GraphQL APIs with Jest testing and PostgreSQL, reducing integration failure rate by 18% through contract validation and schema enforcement.
- Established Angular modules with Bootstrap and SSR rendering, enforcing WCAG accessibility standards across patient portal interfaces, lowering accessibility issues by 30% through component audits and static analysis.
- Automated webpack module bundling and RxJS state management across healthcare workflows, cutting initial load time and runtime render cycles by 25% through lazy loading, dynamic import strategies and chunk caching optimization.
- Resolved front-end performance bottlenecks across critical clinical dashboards using Vue.js component profiling and Mocha test validation, dropping rendering latency by 20% through optimized data binding and component lifecycle management.
- Delivered API and webhook documentation for EHR and health system integrators using Swagger and Postman collections and mock servers, cutting developer onboarding time by 20% for external users through versioned endpoint schemas.

Software Development Engineer | Amazon AWS, Seattle **Dec 2023 - Dec 2024**

- Architected a serverless AWS supply chain framework using Lambda, S3, DynamoDB and Redshift to process purchase orders and inventory transactions, boosting system performance by 15% through SQS queue management.
- Strengthened platform observability using CloudWatch monitoring and AWS Config rules, reducing vulnerability resolution time by 30% and improving audit coverage by 20% through automated CloudTrail log analysis and security governance checks.
- Partnered with product, QA and infrastructure teams to improve release quality by 12%, conducting design and code reviews while implementing JUnit, MockK test suites and feature flag controls within CodePipeline across service boundaries.
- Optimized distributed backend performance using Java, Kotlin and Spring Boot with SNS messaging, EventBridge routing and IAM access controls, raising system throughput by 25% across high-traffic service endpoints.
- Refactored microservice endpoints using OpenSearch indexing, Glue ETL pipelines and ElastiCache Redis query optimization, raising search response time by 35% through composite field index restructuring across order fulfillment services.

Web Developer | University of Colorado Denver **Jan 2022 - May 2023**

- Maintained university web applications using HTML, CSS, JavaScript, WordPress and Bootstrap, produced Figma wireframes for UI/UX redesigns, completing 95% of projects on time and reducing production issues by 70% through cross-browser validation.
- Implemented student analytics platforms and academic enrollment reporting systems using SQL Server, Django and C# backend APIs, increasing student retention by 25% through Tailwind data visualization dashboards and responsive layout components.
- Formulated search optimized page layouts using Flexbox and Grid across university web portals, shrinking page load time by 20% through asset compression, image optimization, semantic HTML5 markup and accessibility standards.
- Enforced code quality standards across agile sprint deliverables through peer code reviews, Git version control and unit testing, maintaining 90% test coverage across front-end component builds and shared UI modules.

Software Engineer | Automate EM, India **May 2019 - Aug 2021**

- Engineered a full-stack home automation platform using Python, C# and MySQL, improving device response time by 35% through event-driven request handling and service decomposition across IoT workflows.
- Assembled CI/CD pipelines on Linux servers using Kubernetes, Ansible and Redis, accelerating development cycle time by 15% through decoupled microservice deployments and service mesh configuration.
- Provisioned Apache Kafka with Scala for real-time device event streaming and message queuing across Azure DevOps workflows, cutting delivery cycles by 20% through asynchronous pipeline processing and partition offset management.
- Configured Jenkins build pipelines with Docker containerization across distributed Node.js and TypeScript services, achieving 30% faster deployment through automated build sequences and environment variable injection.
- Accelerated environment provisioning using Terraform and Azure Monitor alerting, reducing server setup time by 25% through reusable module templates and smoke test validation gates.

PROJECTS

Global Logistics Emission Council | Java, Kotlin, Spring Boot, AWS, PostgreSQL

- Designed a data validation framework using Kotlin with localization in user-preferred languages, improving accuracy by 15% through schema enforcement, field level validation and GLEC regulatory alignment.
- Built asynchronous file processing workflows using Lambda, SQS and S3 pre-signed URLs with SNS dead-letter queues and IAM role controls, achieving 99.5% system availability across logistics ingestion pipelines with automated failover handling.
- Deployed Spring Boot microservices for carbon data ingestion across carrier networks, integrating RDS PostgreSQL, Glue ETL and Elasticsearch for real-time query performance and cross-carrier data aggregation across logistics indexing.
- Analyzed shipment datasets using DynamoDB streams and AppSync event APIs, generating detailed audit reports for Amazon carbon footprint tracking through emissions standard calculations, regulatory benchmarking and data traceability.
- Monitored batch ingestion workflows using CloudWatch dashboards and AWS Config rules, reducing processing latency by 20% through queue analysis, anomaly detection and retry classification.
- Converted raw logistics records into normalized data models with schema versioning, relational integrity checks and backward compatibility, raising data consistency by 25% across multi-tenant reporting systems.

CodeBase AI | React, Next.js, FastAPI, GraphQL, ChromaDB

- Orchestrated an agentic RAG query platform using React and Python with multilingual vector retrieval, Redis caching, and semantic ranking, reducing repeated request latency by 95% and elevating search accuracy across intelligent conversational interfaces.
- Launched AI processing and streaming response workflows seamlessly throughout the application layer, accelerating throughput through persistent session storage, dynamic route prefetching, lazy loading and SSR optimization for scalable user experiences.
- Executed a concurrent Go scraping service with asynchronous goroutine architecture, integrating private indexes with real-time web sources to substantially expand data coverage and reduce ingestion time across search pipelines.
- Enhanced REST and GraphQL APIs using FastAPI with schema enforced contracts, lowering payload overhead by 35% using granular field access, centralized request parsing and streamlined serialization between service boundaries.
- Migrated core services to a hardened backend infrastructure using PostgreSQL, SQLAlchemy ORM, JWT authentication, structured logging, monitoring, and automated CI workflows, improving reliability and deployment stability within production environments.

Home Automation Monitoring Platform | Angular, TypeScript, C#, ASP.NET Core, MQTT, Azure IoT Hub

- Constructed a home automation monitoring platform using C# and ASP.NET Core with Angular, REST hooks and WebSocket connections, enabling real-time device status tracking and scheduling across 500+ installations.
- Secured JWT and OAuth 2.0 authentication using Active Directory across IoT service modules, achieving 99.8% uptime through Kubernetes orchestration and resilient microservice deployment on Azure Platform.
- Generated modular Angular component libraries with MQTT broker integration and Azure IoT Hub event routing, reducing device authentication errors by 30% through centralized interceptor design and token validation.
- Expanded reporting capabilities using Azure Blob Storage, InfluxDB time-series database and Chart.js visualization, delivering device performance analytics across 10+ service regions through telemetry data aggregation.
- Transformed service reporting interfaces using Tailwind CSS and Bootstrap with responsive layout standards, reducing task resolution time by 35% through optimized component rendering and style isolation.
- Documented front-end component specifications and validated API contracts using Postman collections, maintaining 90% code coverage across dashboard modules through SonarQube quality gates and static analysis.

CERTIFICATIONS

AWS Solutions Architect Certified

EDUCATION

University of Colorado Denver — **Denver, USA**
Master of Science (M.S) – Computer Science — **Aug 2021 - May 2023**
